SUMMARY

Data Scientist with 5+ years building production ML systems at scale, from 20M-user behavioral models to NLP pipelines that cut manual work by 90% Experienced across the full stack: problem framing, feature engineering, A/B experimentation, causal inference, and stakeholder delivery Seeking to apply rigorous, impact-driven data science to large-scale product and platform challenges.

EXPERIENCE

Data Strategy Consultant | *Freedom for All Corporation*

New York, NY (Remote) | Aug 2025 – Present

- Architected a full-funnel measurement framework standardizing event tracking across web and product channels, resolving data discrepancies between front-end interactions and back-end conversion logs that had previously blocked leadership reporting
- Defined and deployed a data governance model for campaign analytics, enabling reproducible attribution across channels and surfacing optimization opportunities that improved campaign reach measurably across A/B-tested cohorts
- Translated ambiguous customer journey data to identify high-value engagement segments and retention patterns, building dashboards used by senior leadership in weekly decision reviews

Data Scientist | *Pitt Global, University of Pittsburgh*

Pittsburgh, PA | Oct 2023 – Jul 2025

- Reduced manual leadership reporting effort by 90% by engineering automated Python pipelines that replaced ad hoc spreadsheets with real-time visibility into institutional health metrics, enabling weekly reporting cycles that previously took days
- Cut data entry errors by 35% by building automated validation and pattern-detection scripts across institutional datasets, directly improving the reliability of downstream analytics consumed by stakeholders across 50+ countries
- Built entity resolution pipelines using ML similarity matching to unify fragmented records into a single trusted data source, enabling cross-functional analytics that were previously impossible due to data inconsistency
- Delivered end-to-end analytical solutions –data ingestion through modeling and reporting– for institutional datasets, establishing reproducible workflows that standardized how the team approached new data problems

Data Scientist, Customer Intelligence | *Panda Retail Company, Savola Group*

Jeddah, Saudi Arabia | Apr 2022 – Jul 2023

- Drove 27% revenue uplift by architecting ML pipelines serving 20M+ users, engineering K-Means behavioral segmentation at scale to power personalized experiences across the retailer's digital and in-store channels
- Increased conversion rates by 13% through rigorous A/B experiment design and causal inference frameworks, quantifying incremental impact and informing \$2M+ in promotional spend reallocation
- Operationalized model outputs into 25+ automated digital campaigns in collaboration with Growth and Revenue teams, translating technical outputs into plain-language recommendations adopted by non-technical decision-makers
- Mentored junior analysts on experimental design and A/B methodology, establishing testing standards that reduced invalid experiment launches and improved the statistical rigor of the team's causal analyses

Data Analyst | *SADAFCO*

Jeddah, Saudi Arabia | Jul 2021 – Mar 2022

- Reduced inventory costs by 15% by building regression and moving-average forecasting models in SQL and QlikView, improving stock accuracy across a supply chain with 130+ SKUs spanning 25+ regional distribution centers
- Eliminated a class of manual input errors in SKU classification by translating business rules and demand patterns into codified data logic, replacing ad hoc spreadsheet processes with auditable, repeatable pipelines
- Optimized ETL pipelines to automate recurring reports and feature engineering, enabling self-serve analytics for operations stakeholders and reducing analyst turnaround time on ad hoc requests

EDUCATION

Master of Science Computer & Information Science | *University of Pittsburgh*

2025

Graduate Coursework: Machine Learning & Deep Learning | *Carnegie Mellon University*

Fall 2024

Bachelor of Science in Information Systems – Minor: Cybersecurity | *Effat University*

2019

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript

ML & AI: Classification, Clustering, Forecasting, Churn/LTV Modeling, Recommendation Systems, NLP, Causal Inference, A/B Experimentation, Responsible AI (Bias Detection, Interpretability)

Data Platform: PySpark, Snowflake, Hadoop, AWS, GCP

Visualization: Tableau, Power BI, Matplotlib

Strategy: KPI Design, Impact Measurement, Stakeholder Communication, Growth Analytics, Decision Support
